

CRANE MAINTENANCE AND SERVICING

OUR SERVICES

WE MAINTAIN, INSPECT AND TEST

- Hoists and crane systems
- Electrical and manual lifting gear and winches
- Explosion protected equipment
- Material handling equipment
- Load carrying devices
- Height safety equipment
- Rigging equipment

WHO WE ARE

We are global leaders in intelligent motion solutions who supply lifting and material handling equipment. We have offices in over 50 countries and have acquired 18 global brands.

Our Northern and Southern Ireland locations are unique because we have a team of expert engineers who can install, inspect and service equipment both in-house and on-site.

WHAT WE OFFER

EXPERTISE

We have over 150 years experience in the industry.

KNOWLEDGE

Each engineer is LEEA certified and participates in regular training courses.

CERTIFICATION

Every engineer adheres to LOLER and POWER requirements.

RESOURCES

CMCO manufactures and supplies products to meet customer specifications or replace damaged equipment.

PROACTIVE SOLUTIONS

We schedule regular inspections every 6-12 months as required to decrease the liability of reactive repairs.

INSPECTION AND MAINTENANCE

Equipment can be brought into our workshop for inspection or alternatively we have service vans and can inspect products on site at customer convenience.

We have a diverse portfolio of projects including work with stage hoists, height safety and rigging equipment.

Our online certificate management system provides details on each product inspection. This system is accessible from anywhere and is included free of charge as part of our service package.

CRANE INSTALLATION AND REFURBISHMENT

We offer a versatile range of electric overhead travel cranes, jib cranes, portable gantry cranes, light crane systems and davits. Our standard overhead cranes give maximum flexibility across industries and applications. We can also design non-standard cranes to meet precise specifications.

Our engineers, design, install and refurbish crane systems. We can provide upgrades of older, existing electric overhead travel cranes to bring them in line with current legislation.

Additionally, our team can update crane control systems with Magnetek remote controls and inverter drive systems.

GET IN TOUCH

It is our goal to assist you with the purchase, installation and use of our products. To learn more about what we can offer or to enquire about a specific project, please contact a member of our sales team.
